

Research results on „Phonegap Build Comparison“

Requirement-ID: 6

The build process of approaches is **exactly the same**.

Process:

Step 1a: Create account on www.phonegap.com

There are options for opensource and commercial development.
→ **cost**: free (apace licence) up to 9.99\$/month

Step 1b: Connect to phonegap with your apache-ID

Step 2: Open build.phonegap.com/apps

Step 2a: Select a github repository

Step 2b: Select a ZIP file

The ZIP file / repository should contain:

icon.png

index.html (which redirects to mobile app url)

context.xml (defines features and meta data)

A template of it is to be found on github.com/mstahv/vaadin-phonegap-start/

Step 3: Choose platform for deployment.

Now put this file on your mobile device and install it.
