Additional materials	Storyboard and Anforderungen.pdf

Hospital Wound Management - Product Vision

The Hospital Wound Management Project will enable a much more convenient management
of patients' wounds in a hospital. The Hospital Wound Management Application is designed to run on multiple platforms (iOS, Android, Windows phone). Therefore, the hospital has the chance to integrate the App on every currently established system. Through the application, the personnel of a hospital (doctors, nurses) will be provided with a full graphical overview of patient's wounds, including wound histories and already healed wounds. With it's intuitive and easy handling, the application is adjusted to the needs of the hospital personnel. This simplifies treatment and (medical) care of the wounds and prevents errors, as the data is directly accessible. The documentation of wounds in a hospital will increase in efficiency by not requiring the management and archiving of big amounts of paper documentation.

Hospital Wound Management - Release Plan

Release	1.0					
No Sprints	6					
Due Date	28.05.14

Explanation: We have reserved some points as a buffer for user stories that are still to be discovered. These have been marked with '(<#story points>P)'. We still got some EPICS that depend on our industry partners as well as other user stories. These EPICS have been split over several weeks. After the EPICs' number, we noted how much of the EPICs' story points have been planned for that week.

#	Size	Category	Short Name	Item Description	Acceptance Criteria	Responsible
45	5	Infrastructure/Security	Password hashing	As a developer, i want to save the PINs hashed and salted, so that the Users (presumably re-used) PIN isnt directly stored in the DB. This will lead to a high security level, as the app is storing private information which should not get in hands of third.	* Only the salted password hash is saved in the database. * Login is still possible.	
51	5	Infrastructure/GUI	Settings Menu	As a User, i want to have a settings option with the device's menu button. There, I want to change the DB server and the language, so that I can configure the device without touching any configuration file. This provides a higher usability due to easier handling of configurations for the end-user.	*After pressing the Menu button, a setting dialog is opened. *In the settings dialogue, the language and server address can be changed.	
52	5	GUI	LoginPhoto	As a User, i want to see a picture of myself next to my logg in name in, so that the app creates rapport immediately.	*A Photo of the selected employee is shown before and while the PIN is being entered (on the Login Screen).	
53	3	GUI	Wounded patients	As a User, I want to see which patients are wounded and which are not wounded, so that I have an overview with just one glance (Usability).	*There are little medic bags shown next to wounded patient. *Wounded patients are ordered on top of patients who do not have a wound.	
63	2	GUI	Normed character set	As a user, I want to see Arial as a character set, so that I can read really fast.	* Arial is selected as a character set for the whole project.	

#	Size	Category	Short Name	Item Description	Acceptance Criteria	Responsible
66	5	GUI	Patient name header	As a User, I want to see the current patient's name in the header, so that i can double check, that it really is the right one. The header provides this information through the whole process of dealing with a patient. This function helps to avoid mistakes within app usage.	*In patient view (as long as the patient document can be edited/read) : Show current patient name in the header. Use the name and the surname of the patient for this view.	
67	3	Infrastructure	Languages	As a User, I want a perfect English and German dictionary, so that i do not get confused. Having a proper wording in the app, will lead to faster learning and understanding by the User.	Improvements English/German view - (rule for Dictionary). * Be consistent in wording. * As far as possible, do not mix up English and German expressions.	
69	3	Infrastructure	Repository cleaning	As a Developer, I want to have an good overview in the repository. Through a cleaning, working time could be reduced.	Cleaned up repository with no more data in it, which is not used anymore, or could be better stored somewhere else.	
74	25	Offline-capability [EPIC]	Synchronise DB	As a User, I want to have the newest update of information whenever I use the app. Therefore the information should be synchronised with the DB whenever the device has access to the wireless internet connection. As a User, I do not want to be asked or disturbed, while working on the tablet. The synchronisation should be done automatically. Like that, the User is able to concentrate on his/her work and does not have to deal with technical issues.	* Automatically access to the internet, whenever the device has the possibility. * Synchronisation of the locally saved data with the DB.	

#	Size	Category	Short Name	Item Description	Acceptance Criteria	Responsible
75	25	[EPIC]Optimization for Tablets	Tablet Usability	As a User, I want to have access to the full advantages of working on a tablet. Therefore, the functions should be optimized for a better usability.	* Testing of the application. * Considering of problems of the User * Solving the problems, by providing the User with optimized views of content and editing possibilities.	
76	3	Optimization for Tablets	Get WindowSize	As a User, i want to have the same view on different tablet sizes. Like that, I can use different sizes without confusion about the placement of the app content.	* Optimize the view, so that the User can read and edit all the information on 7" and 10" tablets. *Do so, by providing the tablets' size in pixel.	
77	2	GUI	Patient selection	As a User, I want to see the station of the patient in the patient overview. This gives the possibility to quickly check where the patient is located. The function leads to more working efficiency.	* Add a coloumn into the patient selection, where the current station of the patient is listed.	
78	5	GUI	Layout for turning tablet	As a User, I want to have the chance to use the app in both tablet positions. Therefore I need an optimized view, when I turn the tablet. Turning the tablet counts to the basic functions of the device, therefore a good view for every option is necessarily needed.	* As the app was first optimized for a horizontal view, it must be possible to read and edit the same data in the upright view. *Provide a sufficient layout for the turning tablet.	

#	Size	Category	Short Name	Item Description	Acceptance Criteria	Responsible
79	8	[Bug]GUI	Wound data	As a User, I want to have two possibilities to choose the wound position. First, I have the possibility to choose in the graphic, second I have the possibility to choose in the drop down menu of the wound position field. Therefore it is needed, that that the two possibilities show the same position, no matter where the data is given. This saves the User from doubled work.	* Choosing a wound position in the drop down menu should automatically be shown in the graphic. * In case, the User did already click into the graphic and wants to correct the wound position, this should be also possible by using the drop down menu.	
80	3	[Bug]GUI	Description field	As a User, I want to be able to see all information in the description field, that I have given.	* Fix the problem that a description without spaces can also be shown compleatly in the description field.	opt
81		GUI	Testing	The User wants to have full functionallity without any bugs. Therefore, the app must be tested on diverse functionalities including all possible use cases.	* Define use cases * Every SD and the POs have to test the app and write a short documentation about bugs.	
82	10	GUI/Infrastructure	Bug Fixes	The User wants to have full functionallity without any bugs. Therefore, the bugs, which came out while testing the app have to be eliminated.	* Fix all bugs which are listed in the documentation.	
26			login/drop-down			26
42		GUI	show healed wounds option	As a User, I want to have the option to also see the healed wounds. (Patient Screen)	*Button has been added. * Using the Button has the conequence of showing ALL wounds.	
68		GUI	Select employees	As a User, I want a drop-down Menu to select my User account in the login view, so that it is possible to manage a big amount of Users.	* In the login view, the new User can be selected via a drop-down menu.	

#	Size	Category	Short Name	Item Description	Acceptance Criteria	Responsible
59	3	[BUG]	Wounds creation	As a Developer, i dont want that something (not the User) automatically creates new wounds, so that i can see the real data.	* No more fake data is entered without explicit interaction from a Developer.	

Hospital Wound Management - Sprint Backlog

#	Rel.	Size	Category	Short Name	Item Description	Acceptance Criteria	Responsible
40		8	Infrastructure	Fill skeleton	As a developer, i want our PhoneGAP app skeleton to contain our already implemented features, so that PhoneGAP build can be used.	* App skeleton contains our implemented logic. * Skeleton compiles with PhoneGAP Build. * Documentation on how to get our Data into the Skeleton.	Stefan
71		8	Infrastructure	[Bug] OSR-server	As a PO, I want to see the running WebApp via the OSR-server, so that I can present it to our customers.	* The presentation on http://osr-amos.cs.fau.de/ss14/proj2/ works	Stefan/Ruben
34		3	GUI	Wound healed	As a User, I want to mark a wound as healed, so that it doesnt show on the patient screen and lets the User focus on the new wounds. No new wound descriptions can be added. Like that, a wound case can be closed for a patient.	*A selected wound can be marked as healed. *User is questioned if it really is healed. *A healed wound cant get another wound description.	Eugen
35		3	GUI	See healed wounds	As a User, I want to select whether I see healed wounds or not. Therefore, the User has the choice of only seeing open wound cases, which gives a better overview in cases of many healed wounds.	*A fitting selection method has been implemented. *It is possible to switch modes to see all wounds or only new wounds. *The healed wounds will be marked in green	Eugen
47		3	Infrastructure	Usage of Camera	As a User, i want to be able to use the camera of a tablet to document a wound, so that it can be quickly documented by taking a photo. This option is only possible on android and iOS devices. The function makes the detailed wound documentation easier for the User.	[Android, iOS, NOT Windows] * In the 'add wound description' dialog, the User can choose to add a camera picture. *After choosing this option, the camera app opens. * In Windows, the user is informed, that he can only use stored pictures.	Simon

Hospital Wound Management - Sprint Backlog

#	Rel.	Size	Category	Short Name	Item Description	Acceptance Criteria	Responsible
48		3	Infrastructure	Usage of pictures	As a User, i want to be able to use pictures from the storage to document a wound. For android and iOS devices, this function will exist additionally to the direct usage of the camera. For windows devices this option helps to provide the User with the possibility to document the wounds via photo. The value for the User is a fast possibility to analize the progress of a wound.	[Android, iOS, Windows] * In the 'add wound description' dialog, the User can choose to add a stored picture to the wound description (Android, iOS, Windows). * The picture can be selected in a file browser. * Afterwards, the picture will be stored in the Database.	Simon
73		5	Infrastructure	Pictures into DB	As a User I want to have access to all taken wound pictures. Therefore it is necessary to store them in the DB. Like that, the information will not get lost and the User has access anytime.	*After taking the picture, it is stored in the DB.	Simon
65		3	Infrastructure/GUI	Wound description	As a User, I want to see the data of the latest wound description, when creating a new wound description. This function helps me to fill in the data more quickly and therefore work more efficiently.	* Load data for latest wound description, when entering a new wound description. * All relevant (see DB-layout in Anforderungen.pdf) Data can be entered.	Jenny
72		13	Infrastructure	Offline usability	As a User, I want the possibility to use the application offline. Even if the device I am using is not connected to the wireless network, I do not want to be interrupted in my work.	* Navigation is possible without internet connection. * No synchronisation yet. * If not possible, document why.	Ruben/Jenny

39		5	2	1	Infrastructure	App skeleton	As a developer, i want to have a new folderstructure, which is compatible with PhoneGAP.	App skeleton has been created.	Eugen		
41		5	1	1	[BUG] GUI	Fix Bug (numberformat exception) in Change Pin	As a User, I want to change my PIN-Code; This function is already possible, but there is still a numberformat exception in the background.	After taking care of the bug, the exception should not be shown anymore	Jenny		
24		6	13	13	DB	db-passwd	As a developer, i want to access the DB via web, so that using PhoneGAP is possible.	*A DB can be accessed via the server provided by the OSS-Chair. * A Method to use the DB with our git project is provided. (Password is not checked in to our repository.)	Stefan		
43		6	3	3	GUI	Header\Footer	As a developer, i want to get an icon into the footer, so that it displays information about the develop group company or hospital in the app.	A Develop-Group icon is added to the footer. (or some other icon) * The icon will be stored in a resources folder	Ruben		
44		6	5	3	GUI	Headertext	As a User, i want my name and current station shown in the header, so that it is clearly shown, which User is currently logged in.	* The header contains the User's name and current station. * Default Value: shows the current active ward.	Ruben		
46		6	5	5	GUI	wound descriptions	As a User, I want to add new wound descriptions (possibly with a new picture), so that detailed information can be entered at different times. After the data is saved, it cannot be changed anymore;	*New wound descriptions can be added in the wound data screen. * See the DB-layout for more the information formats. * After saving, descriptions cant be changed anymore.	Simon		

Hospital Wound Management - Feature Archive

#	Rel.	Sprint	Est. Size	Real Size	Category	Short Name	Item Description	Acceptance Criteria	Responsible		
49		6	5	5	Infrastructure	Languages	As a User, i want to switch between languages easily, so that I always see the app in my native language.	*All language strings are stored in a seperate (.xml?) file or a class file and are accessible for development. * Two language files already exist: an english and a german version.	Jenny		
50		6	5	3	GUI	Wound descriptions show + sorting	As a user, i want my wound descriptions ordered by the time of entry into the system, so that I can see how the wound is healing.	* Wound descriptions are ordered accordingly. * Newest on top.* 'Add Wound' Button exists. * On click\touch: Wound description is shown.	Simon		
55		6	3	3	Infrastructure	Story Board	As a developer, i want a updated storyboard, so that coherent understanding and naming of our views is guaranteed.	*Storyboard is updated. * Use the Anforderungen.pdf for reference. * All views are named. * Names are Unique. * Use A-Z, a-z, 0-9, _ for naming.	Ruben		
56		6	3	5	Infrastructure	Refactor Classnames	As a developer, I want our classes to be named according to our storyboard, so that coherent understanding and naming of our views is guaranteed.	* The Views' classes have names according to our storyboard.	Ruben		
58		6	5	5	GUI	Validation feedback for new wound	In case, the User does not fill in a field while creating new wound data, there should pop up a warning that the User has to give the missing information so that every wound information is complete.	In case of missing information, the User is informed about it precisely. Without complete information (filling in all required fields) the User is not able to save the wound data.	Jenny		
22		7	5	5	GUI	Wound documentation (2nd step)	In a second step the User wants to allocate the position of the wound in the graphic of the patient, so that the User can select the location really fast. Attention: After the data is saved, it cannot be changed anymore;	*Allocate wound in graphic (touch) -> wound allocation is shown for the patient. * Male/Female/Unknown is possible.	Ruben/Jenny		

Hospital Wound Management - Feature Archive

#	Rel.	Sprint	Est. Size	Real Size	Category	Short Name	Item Description	Acceptance Criteria	Responsible		
54		7	1	1	Documentation	Tutorial	As a developer, i want a README.txt on how to set up the project easily, so that I need less time to do so.	*Step-By-Step guide on how to set up the project on Linux. * Hint: Re-Use old documents if suited for this purpose.	Simon		
57		7	3	3	GUI	PIN view	As a User, I want to log in using a numeric PIN field, so that I can log in really fast.	* After selecting a User, a numeric PIN field is shown, which allows the User to log on with his PIN.	Eugen		
60		7	1	1	GUI	wound size	As a User, I only want to enter one wound size, if the wound is a circle, so that i am faster.	*If the User enters only one wound size, it is taken as the diameter and saved as length AND width.	Ruben/Jenny		
61		7	1	1	GUI	delete who entered the wound	As a User, no other user can enter wound data in my name, so that a minimum of security is guaranteed.	* The logged in user creates the wound. * He does not have the possibility to change this.	Ruben/Jenny		
62		7	1	1	GUI	bigger 'Bemerkung' field	As a User I want to enter long notes into the 'Bemerkung field', for ease of use.	* The field is big enough for most notes and scales if needed.	Ruben/Jenny		
64		7	3	3	GUI	Wound description	As a User, I want to have the possibility to get more information about a wound then shown in the patient graphic and listed in the wound data next to the picture. Therefore I would like to click on a wound description (there can be more than one in a wound history) and see the information. Through this view the User can gain more detailed information about a wound.	* After clicking on the wound description, the User can read the provided information in a list (see Template/DB in requirements). The information should be scrollable if too much for one page.	Simon		
72		7	8	5	Infrastructure	Integrate storyboard	As a Team member, I want our App to navigate according to our storyboard, so that there is a perfect mid term release.	*Navigation is possible according to our storyboard.	Ruben/Jenny

Hospital Wound Management - Product Glossary

Term	Definition
.* screen	The screens are to be taken from our storyboard.
.* view	Please refer to our storyboard.
DB	[Abbreviation] database
Description field	This field is used in the wound data view. Additional information on a wound can be given in text form up to 2000 words.
Footer	The gray area on the bottom of the screen. Additional information can be shown here.
Header	The gray area on top of the screen. Additional information can be shown here.
Login screen	Screen, where the User can login with a personal 4 digit password.
Patient graphic	Graphical picture of a patient from the front and the back plus graphics of the feet from two positions. Three types of patient graphic exist: Woman, Man, Neutrum.
Patient selection	Menu with names of patients, where the User can select a specific patient.
Patient view	After choosing a patient, the patient view shows the patient graphic and the wound data
Ward	A ward contains several patients, a patient can only be in one ward at a time
